

# WAX AND GREASE REMOVER

**Description**

- Solvent mixture developed for removal of heavy contaminants
- Composition based on aromatic and aliphatic solvents.

**Technical Summary**

- Eliminates most non-water soluble contaminants, such as wax, polish, tar, silicones and grease from old finishes.

Working process		Cleaning of substrates before paint application
	<b>Substrates:</b>	<ul style="list-style-type: none"> <li>• Metal substrates</li> <li>• Old paint in good condition</li> <li>• Substrates coated with appropriate Primer Surfacer</li> </ul>
	<b>Pretreatment / Cleaning:</b>	Clean surface with water and soap Thoroughly dry the cleaned area Degrease with Duxone® Wax and Grease Remover Wipe dry with clean cloth
<b>Important Notes:</b>		<ul style="list-style-type: none"> <li>• Never let Duxone® Wax and Grease Remover evaporate from the surface. Treat only small area at a time.</li> <li>• Change cloths often, never use dirty cloths. It is important to thoroughly clean the surface before any sanding operation. Sanding would grind the contaminants into the surface.</li> </ul>
